

WIFI Antenna Ct008

Specifications Sheet

Features :

Ceramic Patch Antenna (25x25x4.5mm)

On 25.0x25.0x0.8mm PCB

1. Scope

This specification covers the dielectric Patch antenna for WIFI.

2. Name of the product

This product is named "Dielectric Antenna".

3. Electrical characteristics

3-1 Electrical characteristics of antenna

The antenna has the electrical characteristics given in Table 1 under the connectec standard installation conditions shown in the figure.

Table 1

NO	Parameter	Specification
1	Work Frequency	2450 ± 50MHz
2	Center Frequency (With PCB)	2438 ± 10MHz
3	Dimension	Patch Antenna : 25x25x4.5mm PCB : 25.0 x 25.0 x 0.8mm
4	VSWR	2400MHz : <2.0 2600MHz : <2.5
5	Polarization	RHCP
6	Impedance	50 Ohm
7	Operating Temperature	-40~105°C
8	Termination	Ag (Environmentally-Friendly Pb Free)
9	Connector	Ø1.37 163.5mm I-PEX Cable

※ Please follow the Golden Sample characteristics and compensation the instrument measurement value when IQC Inspection.

4. Environmental conditions

4-1 Operating conditions

The antenna has the electrical characteristics given in Tables 1 in the temperature range of -40°C to $+105^{\circ}\text{C}$ and under the environmental conditions of $+40^{\circ}\text{C}$ and 0-95% r.h..

4-2 Storage temperature range

The storage temperature range of products is -40°C to $+105^{\circ}\text{C}$.

4-3 Feed pin temperature range

Maximum temperature for soldering of feed pin is $+290^{\circ}\text{C}$ for 3 second.

5. Reliability tests

5-1 Low-temperature test

Expose the specimen to -40°C for 400 hours and then to normal temperature/humidity for 24 hours or more. After this test, examine its appearance and functions.

5-2 High-temperature test

Expose the specimen to $+105^{\circ}\text{C}$ for 400 hours and then to normal temperature/humidity for 24 hours or more. After this test, examine its appearance and functions.

5-3 High-temperature/high-humidity test

Subject the object to the environmental conditions of $+60^{\circ}\text{C}$ and 90-95% r.h. for 96 hour, then expose to normal temperature/humidity for 24 hours or more. After this test, examine its appearance and functions.

5-4 Thermal sock test

Subject the object to cyclic temperature change (-40°C , 2hour \longleftrightarrow $+85^{\circ}\text{C}$, 2hour) for 100 cycles, the expose to normal temperature/humidity for 24 hours or more.

5-5 Vibration test

5-5-1 Sinusoidal vibration test

Subject the object to vibrations of 5 to 200 to 5Hz swept in 10 minutes, 4.5G at maximum (2mm amplitude), in X and Y directions for two hours each and in Z direction for four hours. After this test, examine its appearance functions.

5-5-2 Vibration test in packaged condition

Subject the object, which is packaged as illustrated, to vibrations of 15 to 60 to 15Hz swept in 6 minutes, 4G at maximum (2mm amplitude at maximum), applied in X, Y and Z directions for two hours each, i.e. six hours in total. After this test, examine its appearance and functions.

5-6 Free fall test in packaged condition

Drop the object, which is packaged as illustrated, to a concrete surface from the height of 90 cm, on one comer, three edges and six faces once each, i.e. 10 times in total. After this test, examine its appearance and functions.

5-7 Soldering heat resistance test

The lead pins of the unit are soaked in solder bath at $260\pm 5^{\circ}\text{C}$ for 10 seconds. After this test, examine its appearance and functions.

5-8 Adhesion test

The device is subjected to be soldered on test PCB. Then apply 0.5Kg (5N) of force for 5 ± 1 seconds in the direction parallel to the substrate. (The soldering should be done by reflow and be conducted with care so that the soldering is uniform and free of defect by stress such as heat shock).

6. Inspection

As for the examination during mass production, we place the antenna in the production fixture individually, using the network analyzer to compare its central frequency, bandwidth, and return loss with that of the golden sample.

7. Warranty

If any defect occurs from the product during proper use within a year after delivery, it will be repaired or replaced free of charge.

8. Others

Any question arising from this specification manual shall be solved by arrangement made by both parties.

9. Precautions for Use

- Antenna pattern use a silver electrode.
- Please don't use the corrosion gas (sulfur gas, chlorine gas) in the atmosphere.
- Please don't direct solder onto the silver electrode of Antenna pattern.

10. Drawings

Shape and Dimension

11. Typical Electrical Characteristics (T=25°C)

Return Loss, SWR, Impedance, measured on test fixture.

12. Coaxial cable Dimension

- 註:
1. 接頭型 IPEX MHF1
 2. 接頭耐拉力 > 1kg (10 sec)
 3. 線材 φ 1.37 (mm)
 4. 單位: mm
 5. 顏色: 灰色

13. PCB
